

Kamloops Aerial Lift Train the Trainer

Kamloops Aerial Lift Train the Trainer - The Aerial Lifts Train the Trainer Certification Program will teach trainers how to effectively train operators in safe industrial mobile machine operation. Trainers are provided with in-depth instruction about aerial lift equipment. The program is provided on an open enrollment basis and delivered at select training sites. Prior to certification, trainers are evaluated and scored on their knowledge and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the number one training provider within the business, we give the best hands-on training possible through chances to practice techniques and concepts learned in the classroom. In addition to hands-on experience, trainers develop general knowledge of instructional methods and equipment theory, field and classroom communication skills, and ability to successfully train and evaluate operators. Trainers will gain an understanding about what traits make an effective trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional methods involved in communicating concepts in a classroom and/or field condition. Knowledge needs a training part to be efficient in workplace conditions. There are three factors of machine operation that the trainer must learn how to convey to operators: what to carry out; how to do it; and the reason why it has to be carried out.

The program provides up-to-date, detailed reference material to be able to help trainers convey the subject matter to equipment operators. Instruction manuals contain detailed information on all aspects of industrial mobile equipment operator training. Incorporated in the package are training aids that provide a visual reference in order to improve the learning experience. The equipment-specific training products include essential materials meant for both the trainer and the operator: overhead transparencies, videos/DVD's, safety message posters, kinds of equipment; digital training aids and stability pyramid.
