

## **Kamloops Forklift Training School**

Kamloops Forklift Training School - Why People Who Use A Forklift Must Take A Forklift Training School - OSHA and CSA establish criteria for forklift safety training which meets current standards and regulations. Anybody planning to use a forklift is needed to successfully complete safety training before utilizing any kind of forklift. The accredited Forklift Operator Training Program is intended to offer individuals training with the practical skills and knowledge to become a forklift operator.

Vehicle and Mobile Equipment safety regulations that apply to forklift use consist of pre-shift checks, and rules for loading and lifting.

Prior to a shift starting, an inspection checklist has to be carried out and given to the Supervisor or Instructor. If whichever maintenance issue is discovered, the machinery must not be operated until the issue is addressed. To be able to indicate the equipment is out of order, the keys have to be removed from the ignition and a warning tag placed in a place which is visible.

Safety rules for loading will comprise checking the load rating capacity on the forklift to know how much the equipment can handle. When starting the machine, the forks must be in the down position. Remember that there is a loss of roughly 100 pounds carrying capacity for every one inch further away from the carriage that the load is carried.

To safely lift a palletized load, drive the forklift toward the pallet and halt with the fork three inches from the load. Level the mast until it is at right angles to the load. Raise the forks to one inch underneath the slot on the pallet and drive forward. Next lift forks four inches. Tilt back the load to secure it for moving. Drive the lift backwards if the load obscures frontal vision. Check behind and honk to warn other personnel. Do not allow forks to drag on the ground.
