Kamloops Crane Operator Certification

Kamloops Crane Operator Certification - The process to permit you in order to operate certain kinds of cranes is to take crane operator certification training to get certification. The certification process consists of classroom learning, hands-on practice and an ability evaluation. Various training programs are available for overhead cranes, mobile cranes, boom trucks, tower cranes, forklifts and other hoisting devices. Trainees would know the fundamentals of safety, equipment characteristics, and operational practices related with these types of cranes.

Customized Practical Training and Evaluation:

Companies could request customized practical training and evaluation on-site at the work facility following the in-class session. Two operators would be trained at a time by one instructor. The length of time needed for training will vary depending on machine kind and the employees' levels of ability, but generally needs one to two hours. The training will focus on practical skills like planning the lift, correct rigging practices and safe operating procedures. Employers should schedule the on-site session in advance.

After in-class instruction, practical operating instruction and assessment, and written test, the trainee would be given an individual wallet certificate and the company would be given a wall certificate. To achieve certification, trainees must have an 80 percent passing score on both practical and written exams.

Included in the crane operator certification program is the following: Guidebooks, policies and regulations; dangers of high voltage; safety concerns; emergency rescue procedures; communications and signals; components, terms and types; pre-operational inspection; pre-lift planning and set-up; crane capacity and configuration; hammerhead / luffing jib crane operations; wire rope and rigging; climbing cranes; fall protection; WHMIS; crane maintenance and CPR & First aid.

The minimum prerequisites for becoming an overhead crane operator consist of possessing the physical and mental capability needed to carry out crane work. Basic capabilities comprise normal field of vision, depth perception, manual dexterity, reaction time and coordination. Potential operators should not have the tendency to become lightheaded. Operators who do not already have evidence of qualifications and experience must achieve certification. Operators must be qualified to operate the certain type of machinery that they would be making use of to perform their work.
